About Game

A Pong game is table tennis based game and the goal is to repeatedly bounce a ball of your paddle until the other player fails to hit it .

PROBLEM STATEMENT :

- Create a basic pong game using JavaScript where you can play with a computer.

- First to reach 10 points should win.

- Create different levels with increasing difficulty, like increasing ball speed, paddle becoming

smaller, etc.

- Add different obstacles in between the arena which deflect the ball at a new angle.

- Add moving obstacles which change the path of the ball.

- Leaderboard.

- PWA(Progressive web application).
